Water:

There is an existing 12-inch diameter water main that extends along North Loop Dr., located approximately 13-feet south of the north right-of-way line. This main is available for service.

Previous water pressure from fire hydrant #4897, located on Lafayette Dr. approximately 500-feet south of North Loop Dr., has yielded a static pressure of 110 (psi), a residual pressure of 98 (psi), and a discharge of 993 (gpm). The owner should, for his own protection and at his own expense, install at the discharge side of each water meter a pressure regulator, strainer, and relief valve, to be set for pressure as desired by the customer. The Lot owner shall be responsible for the operation and maintenance of the above-described water pressure regulating device.

Sanitary Sewer:

There is an existing 12-inch diameter sanitary sewer main that extends along North Loop Dr., located approximately 23-feet south of the north right-of-way line. This main is available for service.

General:

North Loop Dr. is a Texas Department of Transportation (TxDOT) right-of-way. All proposed water and sanitary sewer work to be performed within North Loop Dr. right-of-way requires written permission from TxDOT.

EPWater requires a new service application to provide additional service to the property. New service applications are available at 1154 Hawkins, 3rd floor and should be made 6 to 8 weeks in advance of construction to ensure water for construction work. A site plan, utility plan, grading and drainage plans, landscaping plan, the legal description of the property and a certificate-of-compliance are required at the time of application. Service will be provided in accordance with the current EPWater – PSB Rules and Regulations. The applicant is responsible for the costs of any necessary on-site and off-site extensions, relocations or adjustments of water and sanitary sewer lines and appurtenances.

Stormwater:

EP Water-SW reviewed the property described above and provide the following comments:

As per Municipal Code: new developments and redevelopments are required to maintain the pre-development hydrologic response in their post-development state as nearly as practicable in order to reduce flooding. The code also encourages the use of nonstructural storm water management such as the preservation of greenspace, water harvesting, and other conservation efforts, to the maximum extent practicable, per Chapter 19.19, Section 19.19.010, and Subparagraph A-2 & A-5.

Note: Comments will be addressed at the permitting stage.
