

**CITY OF EL PASO, TEXAS
AGENDA ITEM
DEPARTMENT HEAD'S SUMMARY FORM**

AGENDA DATE: March 12, 2024

CONTACT PERSON(S) NAME AND PHONE NUMBER: Philip F. Etiwe, (915) 212-1553
Kevin Smith, (915) 212-1566
Adriana Castillo, El Paso Water, (915) 594-5538

DISTRICT(S) AFFECTED: All Districts

STRATEGIC GOAL: #3 Promote the Visual Image of El Paso

SUBGOAL: 3.1 Provide business friendly permitting and inspection process
3.2 Set one standard for infrastructure across the city

SUBJECT:

Discussion and action on a Resolution establishing a public hearing date to discuss and review a proposed ordinance, order, or resolution amending land use assumptions, the capital improvements plan, and the impact fee.

BACKGROUND / DISCUSSION:

In accordance with Chapter 395 of the Texas Local Government Code, the City is to update its land use assumptions and capital improvements plan for water and wastewater improvements prior to re-evaluating the impact fee structure. This item will order a public hearing for April 23, 2024 to discuss and review amendments to the land use assumptions, capital improvements plan, and impact fee in accordance with Texas Local Government Code 395.053.

PRIOR COUNCIL ACTION:

May 12, 2009 – City Council adopted Ordinance 017113 for impact fees for water and wastewater services and ancillary items.

February 26, 2024 – City Council briefed on an update on the land use assumptions and capital improvements plan.

March 12, 2024 – public hearing anticipated to be held regarding the update to the land use assumptions and the capital improvement plan.

AMOUNT AND SOURCE OF FUNDING:

N/A

HAVE ALL AFFECTED DEPARTMENTS BEEN NOTIFIED? X YES ___ NO

PRIMARY DEPARTMENT: Planning & Inspections, Planning Division

SECONDARY DEPARTMENT: N/A

*****REQUIRED AUTHORIZATION*****

DEPARTMENT HEAD:

Philip Etiwe

RESOLUTION

WHEREAS, Chapter 395 (Impact Fee Statute) of the Texas Local Government Code provides for the establishment and collection of impact fees; and

WHEREAS, on March 24, 2009, in accordance with the Impact Fee Statute, the City of El Paso adopted the land use assumptions and capital improvements plan under which an impact fee was imposed; and

WHEREAS, Texas Local Government Code Section 395.052 states that a political subdivision imposing an impact fee shall update the land use assumptions and capital improvements plan at least every five years; and

WHEREAS, the City of El Paso is a political subdivision that imposes water and wastewater impact fees in accordance with the Impact Fee Statute; and

WHEREAS, the City Council received an update on the land use assumptions and capital improvements plan on February 26th, 2024; and

WHEREAS, as a part of the process of modifying an impact fee under Texas Local Government Code, Chapter 395, the City Council held a public hearing on March 12th, 2024 to discuss and review the update of the land use assumptions and capital improvements plan; and

WHEREAS, in accordance with Texas Local Government Code Section 395.054, the City of El Paso will hold a public hearing to discuss and review the amendments of the land use assumptions, capital improvements plan, and impact fee;

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL OF THE CITY OF EL PASO, TEXAS, THAT:

The City Council of the City of El Paso, Texas hereby sets a public hearing date for April 23rd, 2024 at 9:00 am in the City Council Chambers on the 1st floor of City Hall, 300 North Campbell Street, El Paso, El Paso County, Texas to discuss and review a proposed ordinance, order, or resolution amending land use assumptions, the capital improvements plan, and the impact fee.

APPROVED this _____ day of _____, 2024.

2024 UPDATE

LAND USE ASSUMPTIONS TECHNICAL REPORT

The review, evaluation, and update of underlying land use assumptions is required by Chapter 395 of the Texas Local Government Code to ensure reasonable future growth and acts as the basis of the City of El Paso's water and wastewater capital improvement plans, thus resulting in impact fee calculations. This report updates the land use assumptions adopted by the El Paso City Council on February 18, 2014, which serve as the foundation for the current water and wastewater impact fees levied on new development in each of the three identified service areas.

Introduction

Texas Local Government Code Chapter 395 permits the use of impact fees to finance capital improvement and facility expansion costs attributable to projected new development within identified service areas located in the corporate boundaries or extraterritorial jurisdiction of a political subdivision. To determine the costs of providing such infrastructure accurately, a planning study known as a Land Use Assumptions (LUA) report is assembled to include a description of changes in land uses, densities, intensities, and population projected within each of these service areas over a 10-year period, as well as at full build-out. The LUA report is referenced in the development of a Capital Improvements Plan (CIP) and the adoption of an impact fee ordinance.

To ensure reasonable future growth estimates serve as the basis for expected capital improvements and facility expansions necessitated by new development and the resulting impact fee calculations, the review, evaluation and update of the underlying LUA and CIP is required at least every five years. Following preparation of this update, the political subdivision's governing body (City Council) is required to hold a public hearing for the purpose of reviewing and determining whether amendments to the LUA, CIP, or the adopted impact fees are necessary.

This report, prepared by the City of El Paso's Planning and Inspections Department (P&I), in partnership with El Paso Water (EPW), is intended to fulfill the requirements of Chapter 395 of the Local Government Code with respect to the periodic review and update of the LUA report. Specifically, this report reassesses the land use assumptions adopted by the El Paso City Council on February 18, 2014. The assumptions adopted on that date comprise the first update of the original assumptions, adopted on March 24, 2009; this report comprises the second update.

In addition to providing information about projected land use characteristics within the three established service areas (Eastside, Northeast, and Westside Water and Sewer Impact Fee Service Areas), this report estimates the total number of projected service units, or standardized measurement of consumption, necessitated by new development, and also provides a snapshot forecast of demand for water and wastewater system improvements or expansion by the year 2033. While a number of unforeseeable future events may affect these predictions, the estimates in this report are based on the best information that is currently available.

Elements of the Land Use Assumptions Report Update

The body of this report is divided into five sections:

Impact Fee Service Areas: An explanation and description of the water and wastewater impact fee service areas.

Methodology: An explanation of the general methodology used to prepare and update the land use assumptions.

Full Build-Out Projection: Population and service unit holding capacity of land located within the impact fee service areas.

Ten-Year Growth Projection: Population and service unit growth assumptions for the period between 2024 and 2033.

Summary: A brief summation of the land use assumptions report 2024 update.

Impact Fee Service Areas

Per state law, one or more service areas must be identified and used in all impact fee analyses to ensure that planned capital improvements and facility expansions, as well as the resulting fee structure, are commensurate with projected proximate demand. A service area may include all or part of the land located within the corporate boundaries of the political subdivision or its extraterritorial jurisdiction (ETJ). Currently, City of El Paso water and wastewater impact fees are levied on three specific service areas within the City's corporate boundary and the ETJ; these areas are referred to as the Northeast, Westside, and Eastside Water and Sewer Impact Fee Service Areas. See Figure 1 for a map delineating the location of the three service areas.

Each service area includes portions or all of the sub-service areas defined in the City of El Paso's Final Annexation Assessment and Strategy Report, completed in the fall of 2008, as well as other areas identified within the Water and Wastewater Impact Fees – Report Addendum, completed in March 2009. See Table 1 for an overview of size and existing intensity characteristics within the three impact fee service areas and the nineteen (19) sub-service areas included in this edition of the report.

In total, the three service areas currently encompass 40,095 acres of land, with nearly two-thirds of the total acreage within the El Paso city limits, while the remaining portion lies within the City's ETJ. The Northeast Service Area is the largest of the three, comprising approximately 47 percent (19,096 acres) of the composite acreage, while the Eastside Service Area currently constitutes nearly 30 percent (12,012 acres) and the Westside Service Area approximately 23 percent (8,987 acres). Each of these areas is likely to be developed, at least partially, within the next ten years.

Figure 1. City of El Paso Water and Sewer Impact Fee Service Area

Table 1 provides a snapshot of existing development intensity within the impact fee service areas and sub-service areas. For the purposes of this report, development intensity is defined as the proportion of acreage within each impact fee service area built upon and zoned to a residential, commercial or industrial district. With respect to current development intensity, approximately 33% of the impact fee composite area is presently developed, representing approximately 13,128 acres.

Service Area	Total Acreage	Developed Acreage	% Acreage Developed
Northeast Impact Fee Service Area			
01 Northeast MP	4,835	610.1	13%

Figure 4. Eastside Water and Sewer Impact Fee Service Area

Methodology

The City of El Paso's existing water and wastewater fee structure is based on a series of growth assumptions which have in turn been used to inform expected capital improvement and facility expansion needs. The updated land use assumptions and associated population and service unit projections contained in this report are formulated based on consideration and incorporation of the following development patterns:

- Current development trends and characteristics;
- Zoning patterns in place and in process;
- Known or anticipated subdivision of land;
- Historic and anticipated growth trends;
- Expected future land use envisioned by *Plan El Paso*;
- Existing master plans

Land Use Assumption Update

Update of the 2014 growth projections began with the development of a database summarizing expected land use acreage at full build-out within each of the nineteen sub-service areas. Assembly of the database included analysis of the City's current zoning map and aerial photography. Zoning cases and subdivision plats in progress provided further information about near future development trends, as did surrounding development densities and types. Additionally, several approved master plans, including land studies and master zoning plans were used in determining the allocation of land use types. Developments were analyzed in each of the three impact fee service areas, including the Northeast (Campo Del Sol and Vista Del Norte Estates), Westside (Cimarron and Enchanted Hills developments), and in the Eastside (Gateway Estates and Tierra Del Este Phases IV, V, and VI).

Consistent with previous analyses, acreage within the impact fee service areas was allocated to either a non-residential or residential land use. Non-residential land use categories include: commercial, industrial, floodplain, institutional/utilities, open space, transportation, parkland or undeveloped land. Residential land use categories are defined by residential type (i.e. conventional or mixed-use) and associated density. Here, development density refers to the number of service units (either residential or residential equivalents) per acre. The level of density will differ by land use; for example, a high-density residential zone is assumed to accommodate relatively more service units per acre when compared to a low-density residential use. Appendix A provides a series of maps delineating previously adopted land use assumptions, as well as updated land use assumptions within each of the three impact fee areas.

Full Build-Out and Ten-Year Growth Projections Update

This expected land use acreage database was then used to update growth assumptions for two time horizons: a ten-year projection, and a full build-out projection. Development of these scenarios involved the estimation of population and service unit figures, two variables intended to provide information regarding demand for water and wastewater services in the impact fee service areas. A service unit is defined as a standardized measure of consumption attributable to an individual unit of development, while population is defined as the number of residents located within an impact fee service area.

Full Build-Out Projection:

The full build-out scenario is intended to provide information about the maximum realistic holding capacity for land within each of the impact fee service areas. It is therefore not tied to a specific time period as a number of external factors, such as economic growth and political events, will ultimately influence development.

Estimation of the full build-out scenario involves the following assumptions:

- For residential land uses, service units per acre are assigned according to the densities provided in Table 2 below. These densities are estimated based on current zoning restrictions, historic trends, and, where applicable, information provided in each of the approved master plans.
- Population per residential service unit is assumed to follow a household size of 2.94 persons per housing unit in El Paso County, as per the Census Quickfacts 2017-2021 estimates. Note that one housing unit is the equivalent of one residential service unit.
- For non-residential land uses, only lands categorized as a commercial or industrial land use type are expected to require water and wastewater services. Based on information provided by the El Paso Water, it is assumed that such land uses will require 7.25 residential equivalent service units per acre.

Land Use Type	Service Units per Acre
Conventional Residential Development	
Low Density	2
Medium Density	4.5
Medium High Density	6
High Density	9
Mixed-Use Development	
Mixed-Use	6
Non-Residential	
Commercial	7.25
Industrial	7.25

Table 2. Land Use Density Assumptions

Using the assumptions outlined in Table 2, the holding capacity within each impact fee service area is projected by first applying the non-residential and residential service unit density per acre to total commercial, industrial, and residential land use acreage figures as identified in the land use assumptions database (detailed in Appendices B-C). Land capacity for population is then derived by applying a factor of 2.94 to total residential service units at full build-out in each of the impact fee service areas.

Ten-Year Growth Projection

Following the development of the full build-out scenario, service unit and population growth projections for the time period corresponding to 2024-2033 were developed. In accordance with state law, the ten-year projections are intended to provide reasonable estimates of demand for water and wastewater services within the established impact fee service area boundaries over a practical planning period. These estimates are then used to inform potential modifications to the associated ten-year capital improvements plan and, if necessary, revisions to the existing impact fee structure.

In an effort to provide the most practical demand projections possible, growth rate assumptions vary by sub-service area. Estimating growth rates at the sub-service area level allows for the incorporation of several influencing factors, such as proximity to existing development and infrastructure, anticipated development projects, and expected phasing of master planned areas.

In the ten-year growth projections, the previously adopted projections were used as a starting point. Specifically, the 2014-2024 sub-service area projections were compared to existing development and adjusted to factor in the influencing factors outlined above, as well as revisions to land use assumptions summarized in Appendices A-C.

The remainder of this report provides service unit and population projections under the full build-out and ten-year scenarios. Each section includes projections by impact fee service area and by impact fee sub-service area. Refer to Appendices B-C for greater detail regarding land use assumptions, associated acreage, and projected service unit and population densities under the full build-out and ten-year scenarios.

Full Build-Out Projection

Table 3 on the following page summarizes total service unit and population projections by impact fee service area and sub-service area under the full build-out scenario. Given the land use assumptions summarized in this report, the three impact fee service areas are expected to hold 169,528 total service units and 281,107 residents at full capacity.

Service Area	Population at Build-Out	Service Units at Full-Build-Out

Table 4. Ten-Year Growth Projections

Summary

Table 5 provides a comparative analysis of the previously approved and updated residential service unit and population estimates under the full build-out scenario. Overall, total projected holding capacity for residential service units and population has remained relatively constant. While there is anticipated to be growth within these service areas, the effects of the COVID-19 pandemic, disruptions in the building supply chain, and current interest rates are impacting and anticipated to continue impacting the building growth over the next few years.

Service Area	Existing Build-Out Estimates		Updated Build-Out Estimates	
	Residential Service Units	Population	Residential Service Units	Population
Northeast	54,923	168,065	38,937	114,475
Westside	23,659	72,398	19,824	58,283
Eastside	37,753	115,524	36,854	108,349
Total	116,335	355,987	95,615	281,107

Table 5. Full Build-Out Projections Comparison

Table 6 provides a summary of the total service unit and population projections for both scenarios by impact fee service area. Given the updated land use assumptions, 170,232 total service units are projected at full build-out, while development demand will reach approximately 59% of the total holding capacity by 2033.

Service Area	Full Build-Out Scenario		2033 (Ten-Year) Scenario	
	Total Service Units	Population	Total Service Units	Population

Project Overview

Background of the Study

EPWater engaged Raftelis to update the existing Water and Wastewater Impact Fees in compliance with State law-Texas Statutes, Local Government Code, Chapter 395 (State Impact Fee Statutes). This report documents the 2024 update of the water and wastewater impact fees and replaces the previous Water and Wastewater Impact Fees-2019 Update. During the last impact fee update process, it was determined that the approved 2019 impact fee amounts would be updated.

Consistent with the previous updates of impact fees, this update determined fees for the same three areas as the previous study (Northeast, Eastside, and Westside). Listed below are the designated service areas.

Northeast Area

- 01- Northeast Master Plan
- 05A- Northwest Fort Bliss A
- 05B- Northwest Fort Bliss B
- 05C- Northwest Fort Bliss C

Westside Area

- 02- Westside MP
- 03A- Northwest Vinton A
- 03E- I-10375 MP
- 04A- Northwest Artcraft A
- 04B- Northwest Artcraft B
- 04C- Northwest Artcraft C
- 04D- Northwest Artcraft D
- 04E- Canutillo
- 02B- Other

Eastside Area

- 08B- Eastside
- 12- South Montana
- 12B- South Montana B
- 06- South Fort Bliss
- 08- East Battle
- 10B- South Fort Bliss B

The calculated water and wastewater impact fees may only be charged to the aforementioned service areas. Any development outside of the service areas will not be charged an impact fee. Maps displaying the EPWater service area are attached in Appendix A. Calculations and results in this report are based on numerical analysis using rounded figures. However, the analysis itself uses figures carried to their ultimate decimal places. Therefore, the sums and products generated may not exactly equal the sum or product if the reader replicates the calculation with the factors shown in the report (due to rounding).

Impact Fee Methodology

The water and wastewater impact fee calculations are based on the incremental method. Under this method, new customers pay a fee representing their share of expansion related developmental costs of new facilities. The incremental method uses a 10-year capital improvement plan (CIP) that accounts for projects that will add future capacity. The impact fee is determined for the supply and treatment categories for water and treatment and collection categories for wastewater.

Each CIP project is allocated to its respective category: reservoirs to water distribution, force mains to wastewater collection, wastewater lines to wastewater collection, etc. The project's costs and service units are summed by category. The categories' total service units then divide the total categories' costs to arrive at a per unit cost. For example, the total costs of the distribution pumping equipment category are divided by the total capacity added by the distribution pumping equipment to arrive at per unit amount. This amount is added to the water distribution portion of the impact fee. A service unit represents the water and wastewater flows in gallons per day (gpd) for a single family residential unit.

Land Use Assumptions and Service Unit Characteristics

Impact fees in Texas must meet the requirements set by the Texas Statutes, Local Government Code, Chapter 395. In compliance with Chapter 395 land use assumptions, see Attachment B, are used to arrive at the residential service units (SUs) and population per residential service as shown in Table 1. The average persons per service unit used is 2.94 persons per household based on the County average as shown in the *2024 Land Use Assumptions Technical Report*. The Land Use Assumption Update uses data from master plans prepared by or on behalf of the City of El Paso, and from other sources used in projecting water and wastewater service demands.

Table 1 - Land Use Assumptions

Service Area	Total Residential Service Units (Build-Out)	Average Household Size Persons/SU	Population per Service Area
Northeast			
01	16,440	2.94	48,334
05A	7,145	2.94	21,006
05B	13,989	2.94	41,128
05C	1,364	2.94	4,010
Westside			
02	0	2.94	0
03A	356	2.94	1,047
03E	3,515	2.94	10,334
04A	5,634	2.94	16,564
04B	3,123	2.94	9,182
04C	381	2.94	1,120
04D	752	2.94	2,211
04E	2,102	2.94	6,180
02B	4,248	2.94	12,489
Eastside			
08B	15,197	2.94	44,679
12	8,580	2.94	25,225
12B	2,627	2.94	7,723
06	419	2.94	1,232
08	7,416	2.94	21,803
10B	3,035	2.94	8,923

Table 1 shows the land use and demographic assumptions used to determine the residential service units and future capacity requirements. These assumptions go into calculating the water and wastewater flow rates that will be used throughout the analysis/model.

Using Table 1 data and assumptions regarding commercial and industrial use, the water and wastewater flow rates are calculated in Table 2. In this study we use 3.29 persons per Service Unit to define the flow rates, this rate is higher than the 2.94 persons per Service Unit in Table 1 due to the additional commercial and industrial usage. The Persons Per Service Unit was updated from 3.50 as reflected within the 2019 Impact Fee Study analysis to 3.29 for this update as referenced in Table 2 below.

Table 2 - Equivalent Service Unit Flows

Description	Water	Wastewater
Average Usage Per Capita (gallons per day-gpd)	115	70
Ratio of Maximum Day Demand to Average Day Demand	<u>1.71¹</u>	<u>1.39</u>
Maximum Day Demand per Capita (gpd)	209	98
Persons per Service Unit	<u>3.29</u>	<u>3.29</u>
Flows per Equivalent Service Unit (gpd)²	688	341

1. Elevated water storage capacity is calculated based on 50% of Maximum Day Demand.

2. Equivalent service unit flows represent flow to a residential, commercial, or industrial user with a water meter size less than 1-inch.

The flows per service unit are 688 gpd for water and 341 gpd for wastewater. These flow rates are used to calculate the number of facility service units in Attachments E and F.

10-Year Population and Service Unit Projections

It is difficult to forecast population growth and developmental growth accurately. The growth directly influences the timeline for when exactly the additional capacity must be realized. This assumption must be made when calculating an impact fee. Table 3 displays the population and development units for the water and wastewater impact fee areas under consideration as of 2033. The values includes 2023 developed acres, population, and residential, non-residential, and total service units plus projected growth over the 10-year period of 2023 through 2033.

Table 3 - 2033 Population and Service Units

Service Area	Developable Acres	Population	Residential Service Units	Non-Residential Service Unit Equivalents	Total Service Units
Northeast	5,363	77,981	26,524	23,944	50,468
Westside	3,309	37,400	12,721	9,378	22,099
Eastside	<u>5,441</u>	<u>56,530</u>	<u>19,228</u>	<u>8,611</u>	<u>27,839</u>
Total	14,314	171,911	58,473	41,933	100,406

Proposed Capital Improvement Facilities

In compliance with the State Impact Fee Statues, proposed capital improvements were prepared by Adriana Castillo, P.E., with EPWater. The capital projects include facilities required by new development in the next ten years. Descriptions of the proposed capital improvement projects are included as Attachment C to this report. The list of CIP projects with estimated costs for each, are included in Attachment D. Attachment E to this report shows the CIP capital, financing costs, capacity, facility service units, unit cost of capacity, and weighted average cost of capacity for each service area used in the impact fee calculation.

Maximum Impact Fee Calculation

The capital projects noted in the CIP plan add capacity for the 10-year period and beyond. To account for this growth Raftelis allocates the costs of the growth-related CIP to the projected development and to the total number of new service units that may be served by the new capacity additions. The 10-year CIP is adding significant capacity, but this capacity will still not be sufficient to serve the projected ultimate built out capacity of the indicated service areas.

Raftelis used the capacities provided by EPWater to estimate capacity added by each capital project. This assumes that all units will be served by the additional capacity regardless of when the growth occurs.

The LUA Update projects new service units for the next ten years (Table 4) to be served by EPWater planned capacity additions as reported in the 10-year CIP. In compliance with the State Impact Fee Statutes, the maximum impact fee per service unit is calculated by dividing the costs of the portion of the CIP required by and attributable to projected new service units by the total projected new service units served by the CIP.

Attachment F provides a summary of the capital costs, capital service units, financing costs, percentage of CIP needed through 2033, and the maximum impact fee for each service area. The model assumes a 35% debt funding rate with a 5% interest rate and a 20-year repayment period for water-related capital projects. For wastewater-related capital projects, it assumes a 63% debt funding rate with the same 5% interest rate and 20-year repayment period. The impact fee calculations include the net present value of the interest and transaction costs of the loans to arrive at a per unit impact fee value. Table 4 summarizes the maximum impact fee by service area.

Table 4 - Maximum Impact Fee by Service Area

Service Area	Projected New Service Units (through 2033)	Maximum Impact Fee per Service Unit
<u>Northeast</u>		
Water	37,660	\$10,023
Wastewater	37,660	<u>1,345</u>
Total		\$11,368
<u>Westside</u>		
Water	5,989	\$3,136
Wastewater	5,989	<u>3,379</u>
Total		\$6,515
<u>Eastside</u>		
Water	11,421	\$14,954
Wastewater	11,421	<u>21,008</u>
Total		\$35,962

Maximum Calculation

The State Impact Fee Statutes require the determination of an “impact fee credit” for the portion of utility service revenues or ad valorem taxes generated by the new service units during the 10-year period. There are two ways to calculate this credit:

- A credit against the impact fee for the portion of ad valorem tax and utility service revenues generated by new service units during the program period that is used for the payment of capital improvements, including the payment of debt, that are included in the capital improvements plan; or
- A credit equal to 50 percent of the total projected cost of implementing the capital improvements plan.

The City of El Paso does not use ad valorem taxes to assist in paying for utility projects, so the ad valorem language does not apply. A credit recognizing the utility service revenues generated by new service units during the capital program period that is used for the payment of capital improvements, including the payment of debt, that are included in the capital improvements plan is warranted and is what has been used since EPWater first adopted impact fees and is what has been used again in this update.

The calculated credit represents the approximation of the utility service revenue projected to be provided by the new service units that may be used to retire debt issued to fund the CIP upon which the impact fee is based. This rate credit to the impact fee prevents new service units from the potential of double counting or paying twice for utility capital improvements and related debt.

Raftelis conducted an analysis involving two scenarios to comprehend the ramifications of a net impact fee following the application of a credit to the maximum impact fee. Tables 5 through 12 illustrate the impact fee considering a maximum credit of 50 percent. Attachment H presents a schedule displaying the net impact fee under two scenarios: (1) Net Impact Fee after Revenue Credit (8.1% for Water and 20.1% for Wastewater) and (2) Net Impact Fee after Maximum Credit (50% for Water and Wastewater). The option displaying the Net Impact Fee after Maximum Credit, as depicted in Tables 5 through 12, results in lower fees.

Table 5 - Impact Fee Credits per Service Unit Equivalent

	Water			Wastewater			Total
Service Area	Max Impact Fee	Max Credit (50%)	Net Impact Fee	Max Impact Fee	Max Credit (50%)	Net Impact Fee	Net Impact Fee
Northeast	\$10,023	(\$5,012)	\$5,012	\$1,345	(\$672)	\$672	\$5,684
Westside	\$3,136	(\$1,568)	\$1,568	\$3,379	(\$1,689)	\$1,689	\$3,257
Eastside	\$14,954	(\$7,477)	\$7,477	\$21,008	(\$10,504)	\$10,504	\$17,981

Impact Fee Assessment Schedule

The impact fee assessment schedule follows established guidelines in “scaling up” or assessing the impact fee to recognize the greater demands placed on the system from larger connections. As stated above, the incremental method is used to calculate the impact fee for a $\frac{3}{4}$ inch meter or for an equivalent residential unit. For meters $\frac{3}{4}$ inch and larger the American Water Works Association (AWWA) standard ratios are used. These guidelines define the $\frac{3}{4}$ inch meter as one unit, and all other meters as a multiple of the $\frac{3}{4}$ inch meter. These ratios are based on the maximum flow capacities for the various meters. Table 6 displays the Northeast service area impact fees calculated according to AWWA standards; the resulting “Meter Capacity Ratio”.

Table 6 - Northeast Water and Wastewater Impact Fee Assessment Schedule (Net Fee after Credit)

Meter Size	Meter Capacity Ratio	Water	Wastewater	Total
Less than 1-Inch	1.00	\$5,012	\$672	\$5,684
1-Inch	1.67	8,370	1,122	9,492
1 1/2-Inch	3.33	16,690	2,238	18,928
2-Inch	5.33	26,714	3,582	30,296
3-Inch	10.00	50,120	6,720	56,840
4-Inch	16.67	83,550	11,202	94,752
6-Inch	33.33	167,050	22,398	189,448
8-Inch	53.33	\$267,290	\$35,838	\$303,128

Attachment H provides a schedule for all impact fee service areas. Tables 7 through 9 compare the current and calculated water, wastewater, and total impact fees for each service area. It should be noted that the current fees are those adopted in 2009 by the El Paso City Council and is a material factor in the increase in the calculated fees. The Eastside Service Area has the greatest impact, which is attributed to the portion of water projects associated with an Advanced Water Purification Facility and wastewater projects associated with Bustamante Wastewater Treatment Plant.

Table 7 - Northeast Impact Fee Comparison (Net Fee after 50% Credit)

Meter Size	Water		Wastewater		Total		Change in Total Fee	
	Current	Calculated	Current	Calculated	Current	Calculated	\$	%
Less than 1-Inch	\$1,178	\$5,012	\$291	\$672	\$1,469	\$5,684	\$4,215	287%

2-Inch	3,714	39,852	4,905	55,986	8,619	95,839	87,220	1012%
3-Inch	6,968	74,770	9,203	105,040	16,171	179,810	163,639	1012%
4-Inch	11,615	124,642	15,341	175,102	26,956	299,743	272,787	1012%
6-Inch	23,223	249,208	30,672	350,098	53,895	599,307	545,412	1012%
8-Inch	37,158	398,748	49,077	560,178	86,235	958,927	872,692	1012%

Tables 10 through 12 provide a comparison of the current impact fees adopted in 2019 and the calculated Net Impact Fee after reducing by the Max Credit. This comparison is acutely relevant due to the dramatic increase in costs since 2019.

Re: Water and Wastewater Capital Improvements Plan– 2024 Impact Fee update

In preparation for the 2024 Impact Fee Update and in accordance with the Texas State Statutes, Local Government Code, Chapter 395, attached please find a description of the proposed Capital Improvements Plan for the El Paso Water Utilities.

Attachment C contains a narrative description of the proposed 10-year capital improvements plan necessitated by and attributed to new development per service area.

Attachment D contains a list of the proposed 10-year capital improvements plan costs necessitated by and attributed to new development per service area.

Maps depicting the proposed water and wastewater capital improvements plan for the three (3) service areas

This information provides the capital improvements plan and costs required to complete the 2024 update and meet the letter and intent of the Texas State Statutes.

Please feel free to contact me with any questions.

12/20/23

A handwritten signature in blue ink that reads "Adriana Castillo".

Attachment C: Capital Improvements Plan

Memo: Water & Wastewater Impact Fee Update 2024

Associated Capital Improvement Water Facilities

WATER SUPPLY AND TREATMENT SYSTEM

ADVANCED WATER PURIFICATION FACILITY – The efforts by EPWater to continue to diversify the City’s water supply portfolio will allow growth demand in the eastside to be met by the Advanced Water Purification Facility producing 10 MGD. The facility includes the wells and blending lines to comply with adequate water quality standards.

KBH EXPANSION Phase 1–In order to meet growth demand in the eastside and northeast, the KBH desalination facility will be expanded to provide an additional 5.0 MGD. The facility expansion includes a new Reverse Osmosis skid and concentrate pipelines.

RESERVOIRS

LOMA REAL A proposed 5.0 MG ground storage tank to meet demand on the East High Pressure Zone and provide suction for the Loma Real Pump Station that will pump water to the proposed Franklin East 1 B reservoir.

FRANKLIN EAST #1B - A proposed 3.0 MG ground storage tank to serve the Franklin East 1 Pressure Zone. The tank is needed to meet future growth development of the areas east of War Highway and to the State line.

TRANSMOUNTAIN NORTHWEST #1A – A proposed 4.0 MG ground storage tank north of Transmountain on the Westside, at the same overflow elevation of Artcraft No. 1, to meet anticipated growth and provide suction storage for the proposed Transmountain Northwest 1 pump station.

TRANSMOUNTAIN NORTHWEST #2A – A proposed 3.0 MG tank north of Transmountain on the Westside, at the same overflow elevation of Artcraft No. 2, to meet anticipated growth.

TRANSMOUNTAIN NORTHWEST #3 – A proposed 1.0 MG tank north of Transmountain on the Westside, at the same overflow elevation of Artcraft No. 3, to meet anticipated growth.

NORTHEAST STATION WELL SUPPLY TANK – A new 2.0 MG ground storage supply tank in Northeast El Paso, adjacent to the Northeast Booster Station. This tank is needed to augment the existing storage capacity of the Northeast Well production system, and to accommodate future supply from the Sherman Well Field. This storage tank will also allow for additional pumping capacity to be installed at the Northeast Booster Station for pumping into the East High Pressure Zone and upper Franklin East Pressure Zone pumping, related future growth.

HOMESTEAD II – A proposed 2.5 MGD elevated storage tank to provide service on the Eastside south of the Montana Ave. corridor to meet demand for future growth on the East Montana Pressure Zone.

JOHN HAYES/VISTA DEL SOL – A proposed 2.5 MGD elevated storage tank to provide service on the Eastside east of Loop 375 to meet demand for future growth on the Joe Battle Pressure Zone.

DISTRIBUTION PUMPING EQUIPMENT

ARTCRAFT #1 NW – A 20.0 MGD pumping station located at Northwestern and Paseo Del Norte (Artcraft Rd) in Northwest El Paso, was completed in late 2002 and will supply Artcraft #2 Reservoir. An additional 5.0 MGD will be added to meet growth demands.

TRANSMOUNTAIN NORTHWEST #1 PUMP STATION – A proposed 3.0 MGD pump station north of Transmountain on the Westside, to pump from Transmountain #1 tank to Transmountain #2 tank to meet growth demand.

TRANSMOUNTAIN NORTHWEST #2 PUMP STATION – A proposed 1.0 MGD pump station north of Transmountain on the Westside, to pump from Transmountain #2 tank to Transmountain #3 tank to meet growth demand.

LOMA REAL Pump station to be located at the Loma Real tank site with an initial 6.0 MGD capacity which will provide pumping to supply the Franklin East 1 B reservoir.

DISTRIBUTION LINES

CANUTILLO/UV TRANSMISSION MAIN - NORTHWEST PHASE IV – Part of an existing major system of large diameter pipelines that extends and delivers water supply from the Canutillo Well Field and the Upper Valley Treatment Plant to the Westside area.

SUPPLY LINE TO TRANSMOUNTAIN#1 TANK- A proposed 48-inch diameter transmission main on the Westside, from the Canutillo 60" diameter main to the Transmountain Northwest #1A tank, to meet growth.

TRANSMOUNTAIN NW SUPPLY TO TRANSMOUNTAIN #1 - A proposed transmission main on the Westside, from the Transmountain Northwest #1 pump station to the Transmountain Northwest Tank 2 to meet growth demand.

TRANSMOUNTAIN NW SUPPLY TO TRANSMOUNTAIN #2 - from the Transmountain Northwest #2 pump station to the Transmountain Northwest Tank 3 to meet growth demand.

UPPER VALLEY BORDERLAND SYSTEM Part of the Westside upgrades to meet future growth the project consists of the installation of a 36-inch transmission main, part of the system of large diameter pipelines that extends and delivers water supply on the Westside area.

EASTSIDE PLANNED SERVICE AREA (PSA) – Proposed transmission main lines necessary to serve areas east of Loop 375. Extensions of transmission mains associated with the construction of future elevated tanks. This item provides the backbone for the water distribution to meet demand.

CANUTILLO- LA UNION/WESTSIDE SYSTEM – Proposed transmission mains necessary to serve areas generally located north of Borderland Road and West of Strahan Road to provide water distribution to serve future growth.

MONTANA EAST SUPPLY LINES– Water distribution mains that have been conceptually planned to provide service on the Eastside, south of the Montana Ave. corridor. This item considers the mains that create a backbone network of water transmission mains (16-inch to 24-inch) to supply these areas.

DYER / RR WATER LINES – A series of planned water mains to convey water to the far northeast part of the city. The proposed pipeline will tie into the Franklin East Distribution Line near the intersection of Stan Roberts Dr. and US-54.

NE FRANKLIN SYSTEM LINES – A network of water distribution mains, generally 16-inch to 24-inch, to be constructed within the Franklin East #1 Pressure Zone service areas in response to and in step with growth.

FRANKLIN EAST DISTRIBUTION LINES – Water distribution mains, generally 24-inch to be constructed within the Franklin East #1 Pressure Zones service area located in the vicinity of Stan Roberts Drive and US54.

Associated Capital Improvement Wastewater Facilities

COLLECTION LINES

NE DYER/RR INTERCEPTOR - Gravity sewer line extending near Stan Roberts Drive and Dyer St. that convey wastewater flows to the Fred Hervey Reclamation Plant. This system will service future development in the Northeast.

OTHER EAST INTERCEPTORS (Area 8 East) – Gravity sewer interceptors related to development east of Zaragoza and Loop 375 for the area commonly known as Montana Vista and adjacent growth areas.

LOOP 375 EAST INTERCEPTOR SYSTEM - These multi-phase, multi-year gravity sewer interceptors will serve areas east of Loop 375. All interceptors in this program will ultimately transport flow to the Bustamante Wastewater Treatment Plant via the Eastside Interceptor System already constructed.

TRANSMOUNTAIN NORTHWEST INTERCEPTORS – Proposed gravity sewer interceptors necessary to serve areas north of Transmountain Road and east of IH-10 on the Westside to meet growth.

NE INTERCEPTOR SYSTEM – Gravity sanitary sewer interceptors to include relief lines to convey wastewater flows from land in the Northeast area. The sanitary sewer pipeline will extend from north of US-54, and south crossing US-54 to the existing Grouse Street Lift Station or the Dyer Railroad Lift Station. The wastewater will ultimately be treated at the Fred Hervey Water Reclamation Plant. This is a multi-year, multi-phase project.

NE FRANKLIN SYSTEM – Pipeline designed to collect and convey wastewater flows from the proposed Northeast Service Area. Flows will be collected from near the Texas-New Mexico border, to include the Sean Haggerty Interceptor and conveying flows to the existing Grouse Street Lift Station, where the wastewater will ultimately be treated at the Fred Hervey Water Reclamation Plant. This is a multi-year, multi-phase project.

PUMPING STATIONS AND FORCE MAINS

UPPER VALLEY THREE LIFT STATIONS – A series of lift stations (1.5, 2.5, 3.5 MGD) proposed for new developments north of Borderland Rd. along the Strahan Rd. corridor. These stations will ultimately discharge into the Strahan Interceptor that will extend and connect into the Easy Way II Lift Station.

CANUTILLO BOSQUE LIFT STATION – Pro-rated lift station capacity needed for portion of the service area located north of Canutillo – La Union. This station flows will ultimately discharge into the Mowad Interceptor and connect into the Easy Way II Lift Station.

TREATMENT PLANT EXPANSION

BUSTAMANTE WWTP EXPANSION – Multi-approach construction project to expand the capacity of the Bustamante Wastewater Treatment Plant from 39.0 MGD to 51.0 MGD.

Attachment D: Capital Improvement Plan Cost Projection

ATTACHMENT D Water and Wastewater Impact Fee Study Proposed Capital Improvements and Costs

Northeast Service Area - Water		Capital Cost
<u>Water Supply and Treatment System</u>		
KBH Expansion Phase 1 (2.5 MG)		\$ 17,000,000
Subtotal:		\$ 17,000,000
<u>Water Distribution System</u>		
Reservoirs		
Loma Real Tank - Ground (5 MG)		\$ 15,000,000
Franklin East 1B - Ground (3 MG)		\$ 9,000,000
NE Station Well Supply Tank (2 MG)		\$ 6,000,000
